You are cordially invited to the third lecture in the spirit of Michael Damm, co-founder of the postgraduate programme Risk Management for Financial Institutions at VU Amsterdam.

In his lecture, Brenno de Winter will focus on the risks of IT security, both from a technical and a behavioural perspective. Based on his extensive experience in data protection, De Winter shares his doubts about the adaptability of risk management functions to the latest cyber risk trends.

More often than not, he observes organizations being unable to organize resilience in the IT security domain. De Winter will set out his ideas about a standardized method for securing data protection, to establish a systematic approach to prevent crises whenever possible and effectively deal with them. Ransomware events can serve as an example of such crises.

After the lecture, our discussant Svetlana Borovkova will reflect on the lecture.

The subsequent Q&A with the audience will be moderated by Fieke van der Lecq, director of the VU Risk Management programme.

This invitation can be freely shared among your professional network contacts. As there are a limited number of seats available, we kindly request you to register.
